

MAGNIFICATION VIEWER

Abstract of the Disclosure

A housing for a magnification loupe is provided having a body portion for an eyepiece lens and a nose portion for an objective lens. The
5 body portion for the eyepiece lens includes outer circumferential threads over which the objective nose portion fits. The objective nose portion includes a pin slot defining an arc across the body of the nose. The arc is configured such that a pin may be secured through the holes in the nose piece to co-act with the threads of the eyepiece body such that radial
10 movement is prohibited.
